

# RACCOON

*Procyon lotor*

fore

hind

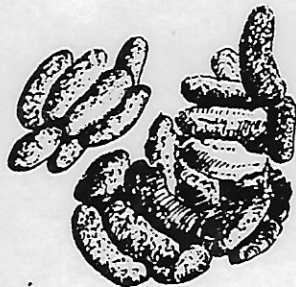

*Common throughout most of the state, tracks can be found in a variety of habitats and even among waterways and wetlands. This animal's unusual track looks like a human hand print, showing five well-formed toes. The small claws appear as dots.*

# Muskrat

Aquatic resident of marshes, stream banks, pond and lake shores. Builds conical houses of marsh vegetation, rising 2-3 feet above water level; also burrows into banks. Feeds largely on aquatic plants, especially cattails.
